Amreet Kaur Sarao

Grade 6 · Student Assessment Report for Python Coding Test 4 · October 29, 2026

Overall Score	Section A · MCQ	Section B · Bug Fix	Section C · Project
98 /100	38 /40	20 /20	40 /40
A+ · Outstanding	2pts × 20 Qs = 40 19 correct · 1 wrong	5pts × 4 Qs = 20 4 correct	5 criteria = 40 pts 5 met

A note for Amreet

Thank you for your hard work and dedication, which resulted in an excellent score of 98/100. Moving forward, please focus on refining your object instantiation syntax and clarifying naming conventions to achieve even greater consistency. I look forward to seeing you apply these skills to more complex programming challenges.

Strengths

- Demonstrated mastery of class structures and methods, correctly answering conceptual questions regarding object blueprints and the requirement of a first parameter in method definitions.
- Showed perfect precision in the Bug Fix section, earning full marks by accurately identifying and correcting errors across all four required segments.
- Exhibited complete command over project requirements by achieving maximum points in all categories, including Class Definition, Constructor Methods, and specific library system functionality like borrow() and return_book().

Focus areas

- Refining the syntax and implementation of object instantiation in Python.
- Reviewing the specific terminology and naming conventions used when creating named object instances.
- Deepening the conceptual grasp of how objects are initialized and assigned to variables.

Project — Code Review **40**/40

GitHub : View code ↗

Criteria	Status	Requirement	Pts
Class Definition	Met	Defines a class (e.g. Book, Library, or similar) using the `class` keyword Excellent job defining the Book class correctly using the class keyword.	**8/8**
Constructor Method	Met	Uses `__init__` to initialise object attributes (e.g. title, author, is_borrowed) Your __init__ method correctly initializes the attributes author, title, and is_borrowed using self.	**8/8**
borrow() Method	Met	Implements a `borrow()` method that marks a book as borrowed The borrow() method successfully updates the is_borrowed status to True and provides helpful feedback to the user.	**8/8**
return_book() Method	Met	Implements a `return_book()` method that marks a book as returned The return_book() method correctly resets the is_borrowed status to False.	**8/8**
Objects Created & Used	Met	Creates at least one object from the class and calls methods on it Great job creating three distinct Book objects and using interactive input() to call the appropriate methods based on user choices.	**8/8**

Python Coding Test 4
